

Registering for and Licensing Duran Audio Software

In order to use Intellivox products, 2 pieces of software are required. WinControl is used to connect to and control the loudspeakers, DDA is used to model a given space and create the filters necessary to utilize a DS or DSX Intellivox.

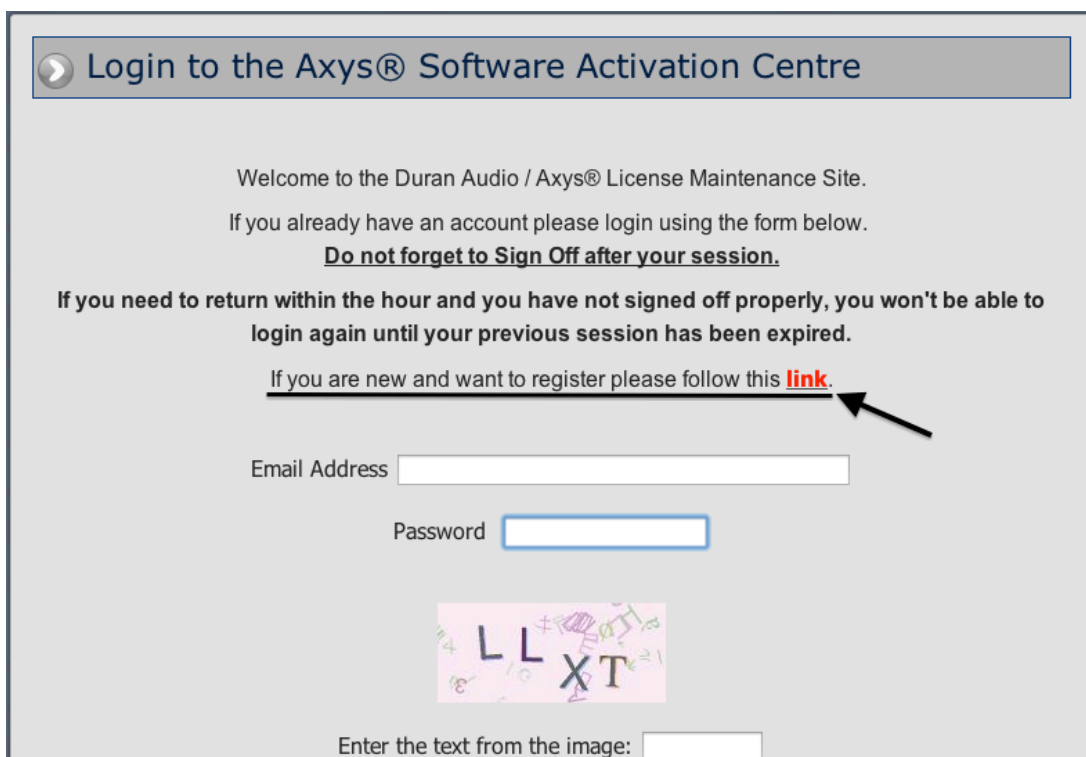

Both pieces of software have the same registration and licensing procedure. Please note you can register for both WinControl and DDA at the same time, but both will have to be licensed separately.

Registration:

1. Go to the website: www.duran-audio.com, click on 'License Request' under the 'Software' drop down.

2. When the 'Software Activation Centre' window appears, click the highlighted 'link' to register. (You will return to this page later to login once you have registered)

3. Fill out the form completely. Make sure to check the box for both DDA and WinControl.

4. At this point your license request will be sent for approval and you should wait to receive a confirmation email with further instructions. Once you have received this email and your registration has been approved you may return to the Software Activation Centre login page (<http://license.duran-audio.com>) and enter your email and password exactly as entered on the registration form.

 Login to the AxyS® Software Activation Centre

Welcome to the Duran Audio / AxyS® License Maintenance Site.
If you already have an account please login using the form below.
Do not forget to Sign Off after your session.
If you need to return within the hour and you have not signed off properly, you won't be able to login again until your previous session has been expired.
If you are new and want to register please follow this [link](#).

SU4AC version 5.21	
Here is another great tool for you to gain productivity using SketchUp as your modeling environment the easy way. SU4AC is a Google SketchUp plug-in written by Greg Longtin of Champion Enterprises.	
This tool enables you to also import DDA models into SketchUp while maintaining the properties of the faces. This provides you an simple way to go back and forth while optimizing your model without loosing valid work done before.	
How to Install this tool?	
Please unzip all files to the Google / Google SketchUp 7 (or 8) / Tools folder within your 'Program Files' folder. It should then appear as an option under the SketchUp Menu - Windows Preferences - Extensions tab. Then check the SU4AC Tools item. This item may need to be checked again when installing SU4AC updates.

7. URGENT: always make sure to use the 'Sign Out' button. If you do not and just close your browser at this point it will take upwards of an hour for the site to acknowledge and close your session before which you will not be able to log back in, which you will need to do in order to proceed with licensing.
8. Run the installer packages for WinControl and DDA. Please note DDA uses Matlab as it's foundation. MCR (Matlab Compiler Runtime) is a standalone version that is included in the DDA installer, please allow this to fully install before continuing.
9. Once installed you will need to license both WinControl and DDA, please do this one at a time to avoid confusion. When opening either for the first time a registration window will appear.

#### Licensing:

DDA is a licensed product. Each individual user, company, agency or institution that uses this program has to obtain a license, one for each computer on which the program is used.

1. Program should be initially installed and unlocked by user with Administrator rights. Install the software and run it. After a while, a license dialog will appear. when run for the first time the application will be 'LOCKED' as shown in the application status field.

2. You must register yourself to get a software account from Duran Audio. After obtaining an account, or if you already have an account, you can obtain an

Activation code (unlocking code) and unlock the application. In order to do so copy and submit the Site code and MID using the web form in the Axyx Software Activation Centre. A direct link to the web form is provided under the Activation button in the license window.

3. The obtained Activation code must be entered in the Activation code field. After pressing the Continue>> button the application will be entered. Next time you start the application, the license window won't be shown unless Scroll Lock or Caps Lock on the keyboard is enabled first. In that case the license dialog will appear showing you that the Application status is 'LICENSED' now. This license will be valid for a limited (e.g., 90) number of days (Days left). To enter the application press the Continue>> button.

The screenshot shows a software license activation dialog box titled "DDA". It features several input fields and buttons. The "Site code" field contains "A86958B0" and the "MID" field contains "ED82-A740-9507-5D9C". Below these, "Days left" is set to "90" and "Uses left" is "N/A". There is an empty "Activation code" field. Two radio buttons are visible: "Extend license" (which is selected) and "Remove license". At the bottom, there are buttons for "Activation", "Homepage", "Enter application", "Cancel", and "Continue >>". A blue bar on the right side of the dialog displays the word "LICENSED".

4. Your license will have to be renewed every so often. After license expiration the application will be LOCKED again. To re-activate the program, follow the instructions above.

#### License removal

5. It is possible to remove the license from your computer at any time. You should also remove your license before you reformat or change hard drive, erase all files from disk, change CPU, or before doing any other operation which can change the initial Site code.
6. Enable Scroll Lock or Caps Lock on your keyboard. Run the application and wait for the License dialog box to pop-up. Select the "Remove license" radio

button, enter the previously obtained Activation code and press the "Continue" button. Press OK to approve license removal process. The Remove code dialog box will pop-up. Copy the Remove code and keep it as a proof of successful removal. After license removal, the application will be LOCKED. To re-activate the program, run the application again, and copy and submit the newly generated Site code and MID using the link to the web form you received before by email.

#### License extension

7. It is possible to extend the license on your computer at any time. This feature is useful in case you want to extend the license period before expiration. To do so, enable Scroll Lock or Caps Lock on your keyboard. Run the application and wait for the License dialog box to pop-up. Select the "Extend license" radio button. The new Site code and MID are shown in the upper red fields. Copy and submit the newly generated Site code and MID using the link to the web form you received before by email. In the period before you obtain the new Activation code (allow for two processing days), you can continue using the application (i.e., until the old expiration date) by pressing the "Enter application" radio button and followed by pressing the Continue>> button. The obtained code must be entered in the Activation code field. After pressing the Continue>> button the application will entered.
