INTERNALLY SOUND SPREADS THE WORD WITH JBL PROFESSIONAL VRX SERIES LOUDSPEAKERS

NEW YORK, NEW YORK, January 12, 2006 — In a unique demonstration of the flexibility and power of the JBL Professional VRX Series, Milan, TN-based Internally Sound has recently completed a number of house of worship installs using the VRX portable line array system.

Combining tradition with cutting-edge technology, Internally Sound has installed a high-quality audio/video system in the First Baptist Church in Jackson, TN. “This is a very traditional-looking church, with a traditional organ, while incorporating more modern guitar and drum sounds,” said Phil Jenkins, co-founder of Internally Sound. “It was the perfect contrast of utilizing the latest in audio to maintain the time-honored qualities of the church.”

Powered by Crown CTs Series amplifiers, the 800-seat First Baptist Church in Jackson has been outfitted with a total of 11 JBL VRX932LA models. Hung from the ceiling, a cluster of four is directed toward the front of the church, with clusters of three on each side and one in the back. Additionally, JBL SRX712M portable PA speakers are used as stage monitors.

“The VRX932LA is one of my favorite choir speakers because it’s precise, it has tremendous long-throw capabilities, and helps keep sound reflections to a minimum,” Jenkins said.

Another 800-seat house of worship, First Baptist Church of Milan, TN is also the proud owner of an accurate and powerful sound system, thanks to Internally Sound. Five VRX932LA speakers are hung in a center cluster, with two more in the back of the main PA cluster facing the choir, along with one VRX918S subwoofer. “It’s probably 100 feet to the back seat and the width of the church is 50 to 60 feet, but that one hang is working perfectly,” Jenkins said. “It’s hitting all the spots without spilling off the walls.”

The Crown CTs-powered system at the First Baptist Church in Milan also includes SRX712M models for monitors, along with a dbx DriveRack 260 EQ and loudspeaker control system. According to Jenkins, the system received high praise from the congregation. “We installed the system without telling anybody aside

First Baptist Church in Jackson, TN.

from the church leadership, and still got comments from the congregation,” he said. “One gentleman with a hearing aid remarked on how much easier the sound was on his ears.”

Lastly, Woodland Church in Jackson, TN is one of the latest houses of worship to feature a high-end VRX sound system. A smaller church (300 seats) with a traditional shape, the pre-existing loudspeakers were outdated, and a significant upgrade was in order. Internally Sound arranged a hanging cluster of four VRX932LA models from the ceiling. Additionally, two JBL Control 25 speakers flank the choir section, while another two were built into a piano and organ rail. The system is also powered by Crown CTs amplifiers, and features a dbx DriveRack 260 EQ and loudspeaker control system.

“With the VRX’s, once you add that fourth box to a cluster, the sound gets so rich,” Jenkins noted. “I can take the dbx DriveRack 260 processor, start adding one box at a time, and it gets so much richer. For a 150-foot max throw, it’s a pretty amazing box. We sure get a lot out of them.”

“Advances in technology are moving forward at even greater cost savings,” said Ted Leamy, Vice President of Installed Sound, JBL Professional. “As Phil points out, the VRX Series not only boasts a lower product cost, but a lower cost of installation and ownership, thanks to its reliability and built-in longevity. This increased value, utilizing the latest developments in loudspeaker technology, is important to the installer and end-user alike. The VRX Series is very easy to install, with reliable performance that will satisfy congregations for years to come.”
