

# EON<sup>®</sup>15

**EON<sup>®</sup>** JBL

15 inch Two-way Speaker System

## Key Features:

- ▶ Light Weight - Only 42 lb.
- ▶ Proprietary 15" Differential Drive<sup>®</sup> Low Frequency Transducer Delivers High Power Handling, Low Distortion and Light Weight
- ▶ 1" Pure Titanium Diaphragm Compression Driver with Patented Diamond Surround
- ▶ 90° x 60° Controlled Directivity Horn Provides Flat Power Response
- ▶ Neutrik Speakon<sup>®</sup> Input and Output Connectors for Maximum Current Transfer and Reliability
- ▶ Thermomaster<sup>®</sup> Total Thermal Management System<sup>®</sup> - Die-Cast Aluminum Baffle Provides More Effective Cooling of the Woofer - Improves Long-Term Reliability and Reduces Power Compression
- ▶ Rugged Polypropylene Enclosure, Balanced for Easy Carrying, Integrated Handle
- ▶ Enclosure Angles Allow the EON15 to be Tilted Back for Use As Stage Monitor
- ▶ Integral Attachment Points for Optional Wall-Mount Brackets (EON BRK1, BRK4-15)
- ▶ 35mm Pole Mount With Tension Screw

## Specifications:

### Performance:

Frequency Range (-10 dB):	60 Hz to 18 kHz
Frequency Response (-3 dB):	80 Hz to 16 kHz
Enclosure Alignment:	6th Order
Long-Term Continuous SPL <sup>1</sup> :	120 dB
Long-Term Peak SPL <sup>2</sup> :	127 dB

### Input:

Input / Connectors:	(2) 4-pin Neutrik Speakon: 1 Input, 1 Loop-Through/Output
Sensitivity:	100 dB SPL, 1W/1m
Nominal Impedance:	8 ohms
Power Handling:	250 Watts

### Protection:

HF Transducer Protection:	Crossover Network Includes Integral HF Protection Circuit
---------------------------	---

### LF Transducer:

Diameter:	380 mm (15 in)
Power Handling <sup>3</sup> :	250 Watts

### HF Driver & Horn:

Diaphragm Diameter:	44 mm (1¾ in)
Power Handling:	50 Watts
Dispersion Angle (H x V):	90° x 60°

### General:

Baffle:	Die-Cast Aluminum
Enclosure:	UL 94HB Polypropylene
Dimensions (H x W x D):	27 x 17 x 17.5"
(mm):	686 x 432 x 445
Internal Volume:	1.8 cu. ft./51 liters
Weight:	42 lb./92 kg

<sup>1</sup> Per industry practice, "Long-Term Continuous SPL" capability is computed from the power amplifier output capacity, the LF driver's 1W/1m sensitivity and its long-term power capability. This is the level the speaker can sustain for a minimum of 100 hours continuously. In this model the HF driver's Long-Term Continuous SPL capability is 2dB higher.

<sup>2</sup> "Long-Term Peak SPL" capability is computed by adding 6 dB to the long-term rating to account for momentary peaks in program material, per 6dB crest factor in the continuous pink noise test signals.

<sup>3</sup> Continuous band-limited (50 - 500 Hz) pink noise input with 6 dB crest factor for 100 hours.

## Product Description:

The EON 15 is a 15 inch two-way passive speaker system that features the same advanced packaging and transducer technology used in the powered version. The system is a light weight, rugged, roadworthy speaker enclosure that incorporates a die-cast aluminum baffle and a structural polypropylene enclosure designed for portable applications.

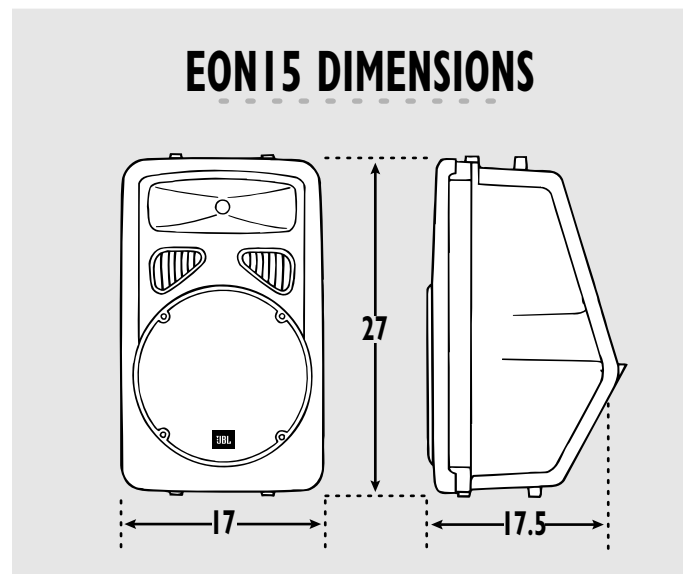

Careful attention has been paid to ensure that the overall system frequency response remains smooth and consistent both on and off axis, which is essential for good articulation and accurate reproduction of speech.

Unique to all of the EON series low frequency cone transducers is a proprietary Differential Drive<sup>®</sup> voice coil scheme which reduces the weight of the magnetic assembly, while improving the heat dissipation of the transducer. For the first time in the industry, it is now possible to achieve high power handling, low distortion *and* light weight in the same package.

A newly designed high frequency driver with a 1¾ inch diameter diaphragm of responsive 1 mil thick titanium provides extended high frequency response and low distortion. Uniform on- and off-axis response is ensured by coupling the driver to a new low distortion Bi-radial high frequency horn. Active high frequency driver protection is incorporated into the unit to ensure HF driver reliability. The use of advanced CAD magnetic modeling resulted in a low weight magnetic assembly which further reduces the system weight.

The EON 15's die-cast aluminum baffle is part of the Thermomaster<sup>®</sup> Total Thermal Management System<sup>®</sup>. This system ensures the reliability of the EON woofer by transferring all of the heat generated in the woofer motor assembly up through the baffle to the area around the ports. As air blows through the ports, it actively cools the system. Because driving the speaker to higher volume levels causes more air to pass through the ports, the louder the system plays, the cooler it runs.

The back of the cabinet is designed so that the system can be leaned back for use as a state monitor. A 35mm pole mount socket is provided. Optional fixed and adjustable angle wall-mount brackets allows for safe installation of EON loudspeakers.

\*\* Dimensions in inches

JBL continually engages in research related to product improvement. New materials, production methods, and design refinements are introduced into existing products without notice as a routine expression of that philosophy. For this reason, any current JBL product may differ in some respect from its published description, but will always equal or exceed the original design specifications unless otherwise stated.
